

# Heliport

**With Integrated 600W Heating System**

**Welcome to the New Paradigm**

Introducing BOX Scientific's newest Heliport offering. While our original Heliport's capabilities leave most users wanting for nothing, large molecule compounds and high melt temp carriers like DMSO still suffered from long thaw times under ambient conditions. So we gave the Heliport an assist in the form of a 600W PTC heating system. Combined with 7 upgraded fans running at 220V it deliver six liters per minute of 30C air at a speed of two meters per second. The result is thawing speeds never before possible for this class of compounds. All made better by the uniformity and reproducibility that make BOX Scientific the new standard of the world.

**List Price: \$3999**

Heliport delivers consistent, uniform thawing with the flip of a switch. No knobs, dials or tweaking of controls required.

Features the same custom-configurable layouts, SBS plate cradles, and automation integration capabilities of our original Heliport

## Technical Specifications

Dimensions	30" x 5" x 7 1/2" (71 x 13 x 90cm)
Shipped Dimensions	40" x 11" x 11" (102 x 28 x 28cm)
Net Weight	10 Lb (4.5kg)
Shipped Weight	16 Lb (7.3kg)
Heating System	600W PTC
Rated Power	220-240V~, 50/60Hz, 4A
Capacity (Standard Mode)	11 SBS positions
Capacity (Heated Mode)	7 SBS Positions
